**Phillies' All the World's Wargames: Volume V 1996 - 1999**

Copyright © 2005 by George D.J. Phillies

Designed by John Kula

*No reproduction in any form of this manuscript, in whole or in part (except for brief quotation in critical articles or reviews), may be made without written authorization from the author.*

Welcome to Volume V of *Phillies' All the World's Wargames*, covering board wargames and their immediate derivatives for the period 1996 - 1999. We also cover a number of board wargames of earlier periods that were not included in Volumes I to IV of *Pimper's All the World's Wargames*.

*Phillies' All The World's Wargames* has continued in the tradition begun by Jeff Pimper in 1975 when he first published his board wargame data base. That publication culminated in the first four volumes of *Pimper's All The World's Wargames*, and the Volume I Addendum.

For each game we have listed the title, any references (such as the issue of the magazine in which the game appeared), publisher, unit level, force level, map scale, historical period, and year of publication. We get regular requests to list additional information. Of most interest to collectors, of course, would be the packaging type and size. Other inquirers are interested in the identity of the game's authors (designer, or designer and developer for firms using the SPI design model) or artists. Still others would like us to determine the number of errors in the rules or the balance of play. To these requests, we answer only that maintaining the current data base is at the outer limit of our resources.

## Reference

The Reference column may include the revision or edition number of the game, but more usually indicates the name and issue number of the magazine in which this game appeared. There are several magazines that publish board wargames, some of which, notably *Strategy & Tactics*, have had a series of publishers.

## Publisher

The Publisher column indicates the game's Publisher. In most cases, it has been necessary to compress the publisher's name to fit the column spacing. An alphabetical list of names appears in a table following the data base. Some companies are known primarily by an acronym; in a few cases, the publisher's official name is or was once an acronym.

## Unit Level

The Unit Level column indicates the type of unit represented by a typical, or most important type of, unit counter. In some cases, assigning unit sizes is challenging. We follow the principle that a unit is identified by its size and employment. Thus, a Soviet *diviziya* is a regiment. The smallest complete

combined-arms unit expected to fight independently is a division; a Roman *legio* is therefore a division. In the Napoleonic and Victorian periods, in some cases the smallest complete combined-arms unit was larger, typically a corps. Many American Civil War period games are ambiguous and do not indicate clearly which unit type is represented by an individual unit counter. A basic American Civil War unit was a so-called *regiment* of circa 1,000 men; we identify these as battalions, based on their size and purity of composition.

## Force Level

The Force Level column indicates the scale of the total force under the control of a single player, whether an individual or a division or the entire forces of a nation or alliance. We follow the principle that the Force size is determined by the size and employment of the forces under the command of a player. A Soviet Empire *diviziya* is therefore a regiment. The smallest complete combined-arms unit expected to fight independently is a division; a Roman *legio* is therefore a division. In the Napoleonic and Victorian periods, in some cases the smallest complete combined-arms unit was larger, typically a corps. A basic American Civil War unit was a so-called regiment of circa 1,000 men; we identify a Civil War regiment as a battalion, based on its size and purity of composition.

## Map Scale

The Map Scale column indicates the area covered by the map. In many cases this is a well-defined area approximating the place where a battle was fought -- the battlefield. Battlefields have changed greatly in size over the centuries. In other cases, the Map Scale can be specified more precisely.

## Historical Period

The Historical Period refers to the time during which the events described by the game took place.

## Year

The Year column is the year of publication, based on internal copyright dates. In some cases, a precise year of publication cannot be determined, in which case the year is indicated 199x, x being unknown. In general, copyright dates are found on unit counters, more rarely on the map or rules. In a few cases, multiple dates are found in a single game. In addition to the games published in the nominal period of this volume, we list games of earlier years that were not included in previous volumes.
